| Ss = total suspended solids of crude sewage [mg/litre]                                     | 389               | 389              | 389     | 389              | 389               | 389       | 389     | n/a                     |
| Ot = Chemical oxygen demand (COD) of effluent after one hour quiescent settlement at ph 7  | Customer specific |                  |         |                  |                   |           |         |                         |
| St = total suspended solids of effluent at ph 7 [mg/litre]                                 |                   |                  |         | Custome          | r specific        |           |         |                         |
|  |                   |                  |         |                  |                   |           |         |                         |

Company comments:

Measured customers are charged on a two part tariff consisting of a Fixed Charge and a variable charge using the Mogden formula. See Wholesale Charges Scheme for more information.

The volume bands are for indicative purposes only. The appropriate tariff will depend on the services received and the loads discharged.

Where charge per m3 of effluent = R + [(V + Bv) or M] + B(Ot/Os) + S(St/Ss)
