

Project AMIDST

Project AMIDST – AMI Data Strategic Transfer

Following a successful bid to the Market Improvement Fund, we have launched a collaboration project between Anglian Water and MOSL which aims to investigate how AMI meter read data can be provided directly into the Central Market Operating System (CMOS). Initially as a pathfinder, we will be creating an online platform that can be used by wholesalers to directly share available AMI data in a standard format, amongst other capabilities.

Adding more timely meter reads into the market will allow greater accuracy of available consumption data. This gives opportunity to realise greater value for all our NHH Customers in areas such as water efficiency, demand management and competitive service offering.

Although it is anticipated that the development of this solution will address some of the challenges we have in the market, the pathfinder is primarily to establish a future proofing of technology and process in preparation for the future proliferation of AMI data across the market.

In order to establish the potential benefits this could bring we will be looking for Retailer engagement to provide statistics relating to the current billing process.

If you are interested in working with us, please advise your account manager and we can arrange a call to share more.
